

SolarDeco™ ProPack Lights

Reliable Solar Lighting That Makes Sense

Benefits of solar power are well known to many in today's environment. Utilizing these benefits of solar power for lighting to create viable lighting solutions has been our goal. Our solar area and sign lighting packages are standardized for your ease of selection and can even be customized for the one-off projects you may have. Solar area and sign lights will save costs on trenching, wiring, transformers and even on installation in most scenarios.

Green Technology – Solar lights help prevent additional green house gasses to be released into the atmosphere. LED fixtures do not contain mercury and are UV free.

Reliability – Our solar lighting systems hold their promise on reliability. Even at severe weather conditions, our solar systems are designed to work 5 consecutive nights to ensure reliability.

Performance – Our tests and performance measurements prove that our solar lights perform at or above local illumination guidelines for most areas including parking lots, community centers, parks and other recreation areas.

Affordability – Solar area and sign lights are affordable and have a typical payback period of 3 to 4 years.

- High performance **LED light fixtures**.
- **Stainless steel enclosure** for battery and controller.
- Top or side of pole **certified solar panel installation** options.
- 12ft. to 22ft. **variable mounting heights** for area lights.
